

Here's an Earful...

Facts on Hearing Loss

- One in every ten (28 million Americans) has hearing loss, making it the most common sensory disorder.
- The prevalence of hearing loss increases with age, and it can affect up to one in three individuals over age 65. Most individuals develop hearing loss over a period of 25 to 30 years.
- Among seniors, hearing loss is the third most prevalent medical condition, following arthritis and hypertension.
- While the vast majority of Americans (95%) with hearing loss could be successfully treated with hearing aids, only one in five currently use them.
